

Heat Stabilizer Technical Data Sheet

Product Characteristics

Heat stabilizers are additives that are intended to shield polymers from the degrading effects of heat at the time of processing or use. An excellent blend of Stabilizers, Co-Stabilizers and modified new generation lubricants has been designed to offer best of the synergies to meet the requirements of the processor. One-Pack Stabilizers are used in a wide range of PVC applications such as: Technical & Window Profiles, Pipes & Fittings, Wires & Cables, Flooring and Flexible PVC Applications.

Applications

- PVC Pipes
- Conduit Pipes
- Edge bond
- Siding

Specifications & Properties

- | | |
|---------------------|-------------|
| ➤ Appearance: | White flake |
| ➤ Lead as % of Pb: | 25 ± 1 |
| ➤ Moisture content: | Max 0.2 % |

Properties

- Excellent Processability
- Excellent heat stability
- Excellent compatibility with PVC
- Excellent dispersibility

Packing

In 25kg bags.
